

## Uni-pivot tone-arm

The low-mass, Naim uni-pivot tone-arm is designed to offer the very best phono cartridges delicate yet precise support at all audio frequencies.

Its geometry and construction ensure that difficulties with warped records, end of side distortion and temperature or humidity problems are greatly reduced. It incorporates a fixed headshell and an extremely stiff, light arm-tube. The low slung counterweight, used to adjust tracking force, places the mass in exactly the right position for both stability and minimum inertia and will remain set even when the arm-tube is lifted clear of the turntable.

Arm-tops can be purchased separately to facilitate easy and fast cartridge changes without the need for realignment and recalibration. Also available is a retrofittable lift/lower device called the Aromatic.

### Specifications

Effective length	230mm
Overhang	18mm
Cartridge weight	5.5 to 12gm
Pivot centre to platter centre	212.5mm
