

Flat-Cap 2x power supply

The Flatcap 2x is an external power supply that replaces the Flatcap2. The improvements to sound quality are subtle but significant: dynamics are more even across the audio band, bass lines are more easily differentiated and the system noise floor is reduced. The performance improvements are even more obvious when powering a preamplifier and CD player at the same time.

The Flatcap 2x can provide exceptionally low noise, dual power supplies for two separate Series 5 components; a NAC 112x and a CD5, or NAC 112x and Stageline, for example.

The Flatcap 2x transformer has two separate secondary windings to isolate each of the dual supplies from the other. It includes four Naim-tested and selected low-noise regulators to achieve its exceptional performance.

Physical changes are: a Fraim-friendly stiffer thicker chassis; a new redesigned transformer with a higher VA rating, lower impedance and higher peak current capability. Heatsinks are also significantly larger.

It can be used with the NAC 202 and NAC 282 preamplifiers, and our SNAXO electronic crossovers to provide an effective, low-cost entry into active system operation. It can be used to power all of the Naim phono stages, active crossovers and preamplifiers except the NAC 552 and NAC 252.

Specifications

Power output	2 x 24V
Mains supply	100V, 115V, 230V (50 or 60Hz)
Dimensions (H x W x D)	70 x 432 x 301mm
Finish	Black
