

NAP 150x power amplifier

The NAP150x's good looks and compact dimensions discretely house an extremely fast, powerful and musical amplifier.

Designed with meticulous attention to detail, it sets new standards in its class with performance and flexibility to match.

The heart of the amp circuit is a version of the world class NAP 500 with a substantial and very quiet power supply using a custom designed and manufactured toroidal transformer.

Improvements over the original NAP 150 include: a new toroidal transformer for improved regulation; separate transformer windings for CH1 and CH2 and preamp(the NAP150 combined CH1 and CH2s windings); an up-rated preamp power supply to improve the performance of the preamp.

Where required the NAP 150x can be used in most series of systems, both passive and active.

Specifications

Power output continuous [8 Ohm]	50 Watts
Voltage gain	+ 29 dB
Input impedance	18 kOhm
Frequency response	-3dB @ 5Hz & 40kHz
Mains supply	100V, 115V, 230V (50 or 60Hz)
Dimensions (H x W x D)	70 x 432 x 301mm
Finish	Black
