

# NAPV 175 3-channel power amplifier

All home entertainment systems need the best possible amplification if they are to reproduce accurately the original soundtrack with all the dynamics and emotion the composer or director originally recorded.

Dynamics and emotion are trademarks of the Naim sound: the NAPV 175 three-channel amplifier is the perfect partner for our AV2 processor.

The power amplifier topology and layout of the NAPV 175 are derived from Naim's flagship amplifier, the NAP 500. The best possible performance is achieved by using extremely fast, high power output transistors. All other components have been selected for ultimate sound quality.

Each of the three power amplifiers has its own supply consisting of a dedicated transformer winding and selected rectifiers and capacitors.

The component board is joined to the low-resonance, die-cast chassis using vibration-reducing mounting systems. Low-energy-transfer feet further diminish the effect of microphonic disturbances to the signal.

The circuits and power supplies in the NAPV 175 exactly match those in the NAP 150 allowing the flexibility to specify matching channels of power amplification for any home entertainment system.

## Specifications

Power output continuous [8 Ohm]	50 Watts per channel
Voltage gain	+ 29 dB
Input impedance	18 kOhm
Frequency response	-3dB @ 5Hz & 40kHz
Mains supply	100V, 115V, 230V (50 or 60Hz)
Dimensions (H x W x D)	70 x 432 x 301mm
Finish	Black
