

n-Vi integrated CD/DVD player/processor/amplifier

Combining DVD, home theatre and genuine high-end hi-fi music reproduction has suddenly become simple. The n-Vi delivers everything you need in one box: DVD and CD player, AV Processor, audio preamplifier and five-channel audio power amplifier. And each element expresses everything we know about making true to life music and video in the home.

n-Vi is available now with an optional FM/DAB radio module. Surround sound modes include Dolby Digital, DTS and Dolby Pro Logic II.

Naim's design team recognised that many Naim owners are primarily music enthusiasts and while adding AV to their systems would be a bonus they were perhaps not so convinced as to move to a separate DVD player and AV processor. In addition, many owners wish to have AV systems but not in the same room as their hi-fi system. n-Vi satisfies these demands and includes all the expertise, skills and attention to detail you would expect from a Naim product. The into-one-box integration has not lessened the desire or indeed even the requirement to deliver traditional Naim values of musical performance and the newer values of video and digital signal processing as illustrated by the award winning DVD5 DVD player and AV2 AV processor.

All you need to do for a complete surround sound system is add the speakers: conveniently, the n-System (comprising the n-Sats, n-Cent and n-SUB provides a perfect match).

Specifications

Media Supported	DVD-Video, DVD-Audio, DVD+/-R, DVD+/-RW, CD Audio and CD-R
Video Outputs	Faroudja 'Progressive scan' chip set for a smooth, solid and detailed picture. DVI Digital video output for direct digital display connection. BNC hi-definition analogue video output.
Video Features	Simultaneous progressive scan on the BNC high definition output and interlaced video on Scart video outputs (RGB/YUV, s-video or composite). Ideal for a back room video monitor or display set-up
Audio in/outputs	Three external analogue and three external digital audio inputs for playback of external sources (digital TV, iPod, tape etc) Audio 'data straightener' using a 'voltage control crystal oscillator' (VCXO) for low jitter audio conversion High performance Burr Brown 6-channel enhanced multi-level delta-sigma DACs (up to 192kHz/24bit)
Amplifier	High performance Tripath Class-T 5-channel amplifier (50W 8 ohms and 90W 4 ohms)
Communications	Naim NA-Bus for bi-directional control and interoperability with other Naim equipment. RS232 port for connection for custom install 'intelligent homes'
Mains supply	100 - 120VAC or 220 - 240VAC 50/60Hz, 50W
Dimensions (H x W x D)	87 x 432 x 314mm
Finish	Black
