

"Its ability to define the leading edge of each note is what keeps you listening and appreciating the subtleties of the music."

- HI-FI CHOICE - SEPTEMBER 2004

The P5 is a turntable born from the legacy of the P25. The P5 celebrates over 30 years of Rega precision crafting specialist hi-fi in Britain. And subsequently combines everything that Rega stands for, which is simply, giving you the best product in terms of quality and style at the best possible price!

The P5 utilises ideas and engineering techniques used on our more expensive turntables; the aluminium surround, its complex CNC machined skeletal low mass micro-fibre plinth. Not to mention the new RB700 tonearm found on the P7.

The Glass platter of the P5 is hand crafted from floated plate glass 12mm in thickness. This makes for a superb platter material which provides stability and assists in the isolation of record information against other sounds (i.e. /knocking or vibrations) and also provides excellent speed stability; thus providing increased sonic enjoyment.

#### **Upgrade power supply: The TT PSU.**

The TT PSU is an optional upgrade power supply for the P5 turntable. It was constructed to help reproduce your music with greater efficacy, utilising technologies adapted from our flagship turntable the P9 and the P5's predecessor the P25.
