

Play any song. In any room. From anywhere.

Sonos® is the first and only digital music system that lets you play all your digital music, all over your house—and control it all from the palm of your hand. Best of all, you don't need a PC in every room, a music server or a wireless network. Just a Sonos ZonePlayer™ and speakers in the rooms of your choice and a Sonos Controller in hand to access all your digital music, no matter where it's stored—on your PC, Mac or Network Attached Storage box.

Sonos Bundle 150

The majority of our customers get started with a Sonos Bundle because it's the easiest and most cost-effective way to experience the thrill of wireless multi-room music. The bundle includes two Sonos ZonePlayers and a handheld Sonos Controller. Plus, every ZonePlayer includes Desktop Controller software so you can control all your music and all your rooms from any desktop or laptop computer. When you want more rooms of music, more control or both, simply add ZonePlayers and Controllers to your heart's content.

Includes 1 x ZP90, 1 x ZP120, 1 x CR100

Controller 100

The Sonos Controller is a wireless, handheld Controller with a 3.5" full-color LCD screen that lets you control all your music and all your ZonePlayers from the palm of your hand. Controllers are not tied to a specific ZonePlayer, so you can use any Controller to control the music — and the volume — in any or all rooms. The Controller provides instant access to your personal collection of music files stored on your computer, plus thousands of Internet radio stations and the most popular online music services.

Zones

ZonePlayer 120

The Sonos ZonePlayer 120 is amplified, wireless, compact, and convenient. With its state-of-the-art digital amplifier, the ZP120 works anywhere you've ever dreamed of having music — the bedroom, the bathroom or even the backyard. All you have to do is plug it in, connect your choice of speakers and you've got a room filled with music.

ZonePlayer 90

The Sonos ZonePlayer 90 lets you play all the music you want, all over your house, on all the audio equipment you already own — your home theater receiver, stereo system, powered speakers, and more. Just connect the ZP90 to any amplified audio device in any room and it's instantly part of the wireless Sonos system.

ZoneBridge BR100

The ZoneBridge™ is a wireless product that can be used instead of a ZonePlayer to set up your wireless Sonos system. If your house doesn't have Ethernet wiring or your router is in a room where you don't want music, connect the ZoneBridge to your router to instantly activate the SonosNet wireless mesh network. The ZoneBridge can also be used as a wireless extender to increase the range of your system and expand the Controller's wireless coverage.

Charging Cradle

The Sonos Charging Cradle is the ultimate charging and resting place for your Sonos Controller. When the Controller is in the cradle, it's fully functional.

Please note

The Sonos units sold in Australia have a different wireless setup to those sold in the US. The US Sonos units do not conform to Australia CTick certification standards. Sonos units manufactured for the US market cannot be legally imported, sold or used in Australia.

The Sonos units sold in Australia are similar to the units Sonos sell in Europe. You will find that the Sonos Europe web store pricing in Euros or Pounds is similar to Australian pricing.

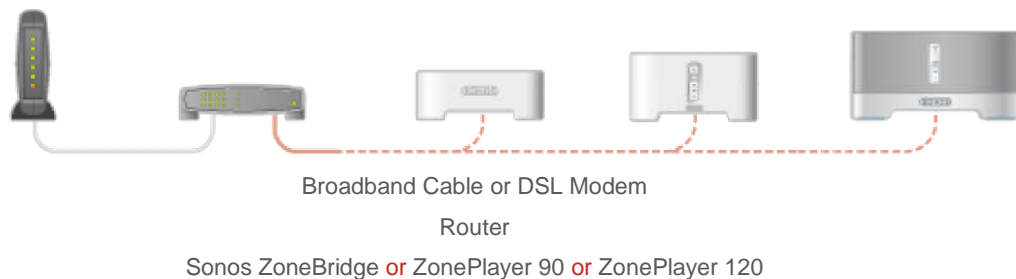

Setup that's out-of-the-box simple.

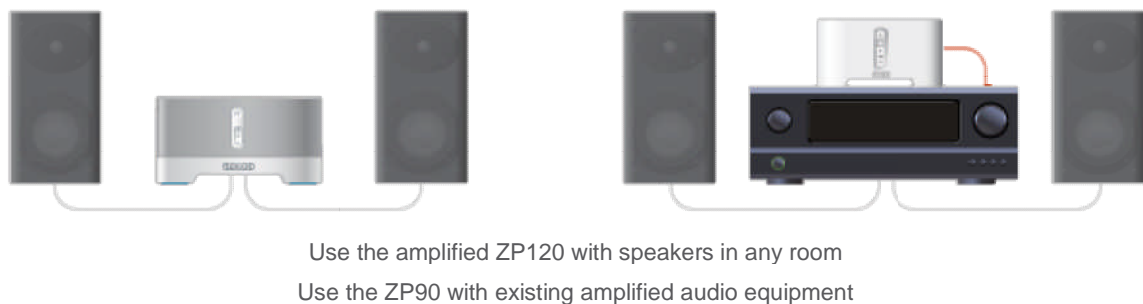

When it comes to setting up your Sonos system, we live by the age-old adage keep it simple. You don't need to be a tech genius or a wireless expert. You don't have to break through walls or hire someone to re-wire your house. And you don't need to know what hex keys and SSID are. All you need is a high-speed Internet connection, a router and two fingers so you can push the buttons on the front of every ZonePlayer. When you want to expand, just add more ZonePlayers and Controllers and get those fingers ready. Check out the diagrams below to see just how easy Sonos setup really is.

It's as easy as 1-2-3

- 1) Connect one ZoneBridge or ZonePlayer to your broadband router.

- 2) Add more ZonePlayers wirelessly. Wherever you want music.

3) Wirelessly control all your music and all your rooms from the palm of your hand.
